

Penile Strangulation by Rubber Band - Case Report

Mohinder Kumar, Amit Jain, Suchitra Malhotra

Abstract:

There are many reports of penile strangulation in the medical literature. Though this condition is not common but is definitely is of interest because of involvement of Penis. We report case of penile strangulation due to rubber band application who presented to us late after he had developed frank distal necrosis. Patient was managed with excision of necrotic tissue followed by skin grafting.
